

Basic 24V Breakout

This small breakout attaches directly to our SilverDust MG, IG, IGF, IGC, and IG8 servo motor controller's SMI port and breaks out power, communications (RS-232/485), and I/O. The breakout also converts the controller's TTL level I/O to 5 24V isolated inputs and 2 24V open collector outputs. With a list price of \$75, this breakout is an easy way of adding extra 24V I/O to one of our controllers.

See technical document QCI-TD046 "Basic Breakout w 24V 5 In,2 Out" on our website for more details.

Prices are subject to change without notice.
