For Immediate Release

QuickSilver Adds Modbus TCP

QuickSilver's SilverDust IG8 servo controller/driver is now available with a Modbus TCP option. This popular protocol works over Ethernet and allows PLCs and other host controllers to share data via a register mapping scheme. When combined with QuickSilver's native RS-485 serial and CANopen® networks, the servo controller becomes a cost effective communications bridge.

For more details, see www.QuickSilverControls.com for Application Note "QCI-AN028 Modbus TCP".

CANopen® and CiA® are registered community trade marks of CAN in Automation e.V.
