# Reduction of Hazardous Substances (RoHS) Progress

5 March 2007

We believe our products are not under any of the regulated categories of devices in the RoHS legislation, but we are still designing our new products for RoHS and converting our most popular existing products to RoHS. We believe this will benefit our customers and provide a market advantage while also preventing problems if the categories are interpreted differently than we understand them. This will also simplify the integration of our product into systems that are covered by RoHS legislation.

The following is a list of items that are or will be RoHS compliant. If you have a special part number or need more clarification, please send us an email with the desired part number and we will let you know if and when the product will be available.

To specify RoHS compliance on a product, add "RoHS" to the end of the part number. This will insure you get the RoHS version of the part. Please note, we may substitute non-RoHS product with RoHS product. Call for pricing and availability.

NOTE:
